

**Release Reporting Advisory Committee
Integration/Simplicity Workgroup
March 7, 2008
Conference Call Meeting
11:00 am**

Agenda

1. Discussion of the approach suggested by the Risk Assessment Work Group as described in the attached notes from their last meeting.

Please contact Lori Saliby at lori.saliby@po.state.ct.us or 860-424-3329 for information.

Release Reporting Advisory Committee
Risk Assessment Workgroup
February 6, 2008 Meeting

Meeting Notes

Several sources of risk information were discussed as being potentially useful in determining what to report, reporting quantity, and exceptions to reporting requirements.

- MA. Contingency Plan (1956 pages)
- Connecticut Chemical Hazard and Vulnerability Analysis (100 chemicals)
- Extremely Hazardous Substances List
- CT 1994 Draft Release Reporting Regulations and 1998 Work Group
- Petroleum Products (dielectric, motor fuel, hydraulic oil, transmission fluid)

It was suggested that there be a default quantity which would apply to most releases and then have 2 categories of exceptions, one for very hazardous materials which would need a much lower reporting threshold and one for less hazardous substances or products which might have a higher reporting threshold.

There was discussion on what the default quantity might be. A pint and a pound was what was used in the 1994 draft. Industry may feel that that is too small of a quantity. It was suggested that something like a gallon or 10 pounds might not be protective enough. Possibly something in between would be acceptable.
